

GEL ANTI-SPOT

Special Concentrate

REF: 1.15090 (R) **PRESENTATION:** 15ml tube

A film forming gel spot product, especially for the regulation of local inflammations and impurities due to seborrhea. The instant fixed film former supports the exact spot, with the active agents. A cocktail of herbal raw materials in combination with salicylic acid regulates very gently the seborrhea, avoids excessive hornification, improves the sebum metabolism and impurities subside much quicker.

RECOMMENDED FOR:

For oily and acne-prone skin.

INGREDIENTS & BENEFITS:

Cytobiol™ Iris A² - A combination of Zinc Salt, Iris Extract and Vitamin A:
(Targeting acne-prone skin)

Zinc Salt

It is a sebum regulator and effects at the same time by blocking the proliferation of propionic bacteria antibacterial, even before an inflammation may show.

Iris Extract

Sebum regulating and skin pore refining. At the same time the keratinization is normalized and the prevention against new comedones is activated. The complexion appears much finer and balanced.

Vitamin A

Vitamin A is a growth factor that favors cell multiplication. It is also a tissue regenerator and protector of the epidermis. Finally, vitamin A is recommended for oily skin as it regulates seborrhea by inhibiting the synthesis of lipids.

** This synergistic blend of actives fights against the functional and physical signs of acne, be it the common adolescent form (hormonal causes) or the adult form (due to lifestyle and environment). It preventing the appearance of acne problems while reducing all symptoms related to the imbalance of cutaneous flora and lipidic metabolism. It purifies the skin and diminishes shine and pore visibility.*

Salicylic Acid

Salicylic acid prevents inflammatory process and facilitates the loosening and removal of horn cell of the epidermis. This way the hornification is counteracted and improves the sebum metabolism. It prevents a new congestion of the sebaceous gland and the quantity of comedones is decreased.

GEL ANTI-SPOT

Special Concentrate

Cyclodextrin Composition

Cyclic oligosaccharides with a hydrophilic external portion and a hydrophobic internal cavity that can accommodate a wide variety of active and unstable molecules such as vitamins. The result is in fact the formation of a complex through a process of encapsulation which protects the guest molecules from oxidative and degenerative processes, preserving their integrity.

Tocopherol

Source of vitamin E, a powerful antioxidant; promotes maximum moisturization and helps soften the skin while protects the cell membranes from free radical damage.
