

OVERNIGHT BRIGHTENING-POWER CREAM

This intensive lightening night cream addresses nourishing and re-texturizing enzymatic factors while simultaneously delivering a brighter complexion thanks to the newly added HD-White Complex. Formulated to respect and boosts the skin's own night-time recovery abilities, this new generation richer-textured night cream grants maximum comfort without heaviness.

Ref. 1814 - 50ml jar

The BENEFITS

- Quickly lightens the entire complexion and fades pigmentation spots.
- Refines pores and works overnight for a more homogeneous surface texture.
- Deeply hydrates the skin.

The CUSTOMER

- Ideal for consumers concerned with signs of aging who are also looking for intensified brightening and improved skin texture.
- All users of CSW.
- CS Total-Resurface Overnight Cream users who may be looking for a stronger lightening effect.

The TECHNOLOGY

CELLACTEL 2 WHITE COMPLEX

Using the same cellular bio-nutrients present in the original Cellactel 2 Complex combined with an advanced peptide technology and botanical extracts of Rumex occidentalis extract and vitamin C it provides: lifting and anti-wrinkle effects; corrects future pigmentation disorders at their origin; lightens existing melanin deposits and fades brown spots. It offers remarkable anti-inflammatory properties with a very selective action over the melanocytes.

HD-WHITE COMPLEX

Consists of powerful whitening ingredients and antioxidants. Delivered via a SMART LIPOSOMAL COMPLEX (to prevent any breakdown before the ingredients reach their targeted pathways). ARBUTIN strongly inhibits tyrosine activity (the skin's own key enzyme accelerating the pigmentation process). GLUTATHIONE offers high degrees of antioxidant action, directly targeted to melanin and melanocyte activity. ASCORBIC ACID + ASCORBYL PALMITATE boost the brightening effects of the overall formula with additional stabilized vitamin C.

ENZYME OVERNIGHT COMPLEX

The complex is comprised of lactoferrin, lipase, lactoperoxidase and glucose oxidase; these being protease and glucose enzymes (protein-digesting and sugar-reducing enzymes, respectively) that contribute to refinement of the size of pores while, at the same time, reducing the color contrast of existing pigmentation spots (melanin-keratin clusters). This complex uses milk derivatives and the

OVERNIGHT BRIGHTENING-POWER CREAM

bacteria *Bacillus subtilis*, comprised of protease enzymes (protein-digesting enzymes) to help counteract the buildup of dead cells, reducing the pores size and reducing the color contrast of existing pigmentation spots.

The APPLICATION

To be applied in the evening, alone, or preferably after the CSW BRIGHTENING DIAMOND SERUM. Avoid the immediate eye area.

Apply all year around alternating with the CSW DAYTIME BRIGHTENING-POWER EMULSION each morning.
